

element is effective to impart a smooth finish to the top of a concrete post, pier or column cast in the device.

Claim 2 (original). The device of claim 1 wherein the first element has a concave transitional surface.

Claim 3 (canceled).

Claim 4. (canceled).

Claim 5 (previously amended). The device of claim 1 wherein the depending member fits snugly into the paper tubular concrete form.

Claim 6 (canceled).

Claim 7 (canceled).

Claim 8 (original). The device of claim 7 1 wherein the second element has an upwardly extending drive axle located therein.

Claim 9 (previously amended). The device of claim 8 wherein the drive axle is adapted for attachment to a source of rotary motion to impart relative rotating movement between the first element and the second element.

Claim 10 (original). The device of claim 9 wherein the drive axle is removable.

Claim 11 (original). The device of claim 10 wherein an anchor bolt may be received in the second element after the drive axle has been removed.

Claim 12 (original). The device of claim 7 1 wherein the second element has an outwardly extending flange at a periphery thereof, the outwardly extending flange extending at least partially over the first element.

Claim 13 (original). The device of claim 1 wherein the smooth transitional surface of the first element has a compound shape.

Claims 14-20 (canceled).

Claim 21 (canceled).

Remarks

The present amendments are presented to put the application in condition for allowance. Reconsideration of the application and allowance of the claims are respectfully requested.
